CONTENTS

Number 1

EDITORIAL 1

E. G. YOUNGS. The measurement of the variation with depth of the hydraulic conductivity of saturated soil monoliths 3

P. B. BARRACLOUGH and P. B. TINKER. The determination of ionic diffusion coefficients in field soils. II. Diffusion of bromide ions in undisturbed soil cores 13

A. PINNER and P. H. NYE. A pulse method for studying effects of dead-end pores, slow equilibration and soil structure on diffusion of solutes in soil 25

T. M. ADDISCOTT. Simulating diffusion within soil aggregates: a simple model for cubic and other regularly shaped aggregates 37

J. B. REID and M. J. GOSS. Interactions between soil drying due to plant water use and decreases in aggregate stability caused by maize roots 47

K. L. BOCOCK, A. D. BAILEY and M. HORNUNG. Variation in soil temperature with microrelief and soil depth in a newly planted forest 55

O. P. BANSAL. Thermodynamics of K–Ni and Ca–Ni exchange reactions on kaolinite clay 63

K. M. GOH and MARY R. WILLIAMS. Distribution of carbon, nitrogen, phosphorus, sulphur, and acidity in two molecular weight fractions of organic matter in soil chronosequences 73

G. P. SPARLING, M. V. CHESHIRE and C. M. MUNDIE. Effect of barley plants on the decomposition of ^{14}C-labelled soil organic matter 89

J. A. ROTHER, J. W. MILLBANK and I. THORNTON. Seasonal fluctuations in nitrogen fixation (acetylene reduction) by free-living bacteria in soils contaminated with cadmium, lead and zinc 101

B. F. L. SMITH, E. PATERSON and B. D. MITCHELL. Trimethylsilylation of commonly occurring primary and secondary minerals in soils 115

H. A. ANDERSON, M. L. BERROW, V. C. FARMER, A. HEPBURN, J. D. RUSSELL and A. D. WALKER. A reassessment of podzol formation processes 125

BOOKS ON SOIL SCIENCE RECENTLY RECEIVED 137

Number 2

J. M. TISDALL and J. M. OADES. Organic matter and water-stable aggregates in soils 141

D. D. REIBLE and F. H. SHAIR. A technique for the measurement of gaseous diffusion in porous media 165

D. T. PRITCHARD and J. A. CURRIE. Diffusion coefficients of carbon dioxide, nitrous oxide, ethylene and ethane in air and their measurement 175

G. D. BUCHAN. Predicting bare soil temperature. I. Theory and models for the multi-day mean diurnal variation 185

G. D. BUCHAN. Predicting bare soil temperature. II. Experimental testing of multi-day models 199

A. M. POSNER and N. J. BARROW. Simplification of a model for ion adsorption on oxide surfaces 211

N. J. BARROW and T. C. SHAW. Effects of ionic strength and nature of the cation on the desorption of fluoride from soil 219

GERALDINE S. P. RITCHIE and A. M. POSNER. The effect of pH and metal binding on the transport properties of humic acids 233

A. S. BLACK and A. S. CAMPBELL. Ionic strength of soil solution and its effect on charge properties of some New Zealand soils (Errata, p. 779) 249

J. C. RYDEN. Effects of acetylene on nitrification and denitrification in two soils during incubation with ammonium nitrate 263

B. H. OLSON and I. THORNTON. The resistance patterns to metals of bacterial populations in contaminated land 271

P. J. LOVELAND and D. C. FINDLAY. Composition and development of some soils on glauconitic Cretaceous (Upper Greensand) rocks in southern England 279

J. W. MUIR and J. LOGAN. Eluvial/illuvial coefficients of major elements and the corresponding losses and gains in three soil profiles 295

G. R. GOBRAN, J. E. DUFEY and H. LAUDELOUT. The use of gypsum for preventing soil sodification: effect of gypsum particle size and location in the profile 309

C. J. CHARTRES. The use of landform–soil associations in irrigation soil surveys in northern Nigeria 317

APPLICATIONS

M. B. PAGE and O. TALIBUDEEN. Critical potassium potentials for crops. I. The effect of soil type on the growth of ryegrass and creeping red fescue 329

CORRIGENDUM 349

Number 3

G. D. Towner. Analysing one-step outflow experiments to calculate soil–water diffusivities, using Gardner's Equation 351

G. D. Buchan. Predicting bare soil temperature. III. Extension to single-day variation 365

A. P. Hamblin. Soil water behaviour in response to changes in soil structure 375

J. B. Reid and M. J. Goss. Suppression of decomposition of ^{14}C-labelled plant roots in the presence of living roots of maize and perennial ryegrass 387

J. B. Reid, M. J. Goss and P. D. Robertson. Relationship between the decreases in soil stability effected by the growth of maize roots and changes in organically bound iron and aluminium 397

G. Spoor, P. B. Leeds-Harrison and R. J. Godwin. Some fundamental aspects of the formation, stability and failure of mole drainage channels 411

G. Spoor, P. B. Leeds-Harrison and R. J. Godwin. Potential role of soil density and clay mineralogy in assessing the suitability of soils for mole drainage 427

O. K. Borggaard. The influence of iron oxides on the surface area of soil 443

R. T. Shanmuganathan and J. M. Oades. Modification of soil physical properties by manipulating the net surface charge on colloids through addition of Fe(III) polycations 451

S. D. Young, B. W. Bache and D. J. Linehan. The potentiometric measurement of stability constants of soil polycarboxylate–Cu^{2+} chelates (Errata, p. 779) 467

Y. K. Soon and T. E. Bates. Chemical pools of cadmium, nickel and zinc in polluted soils and some preliminary indications of their availability to plants 477

I. Shainberg and M. Gal. The effect of lime on the response of soils to sodic conditions 489

A. W. Limmer, K. W. Steele and A. T. Wilson. Direct field measurement of N_2 and N_2O evolution from soil 499

J. C. Hughes. High gradient magnetic separation of some soil clays from Nigeria, Brazil and Colombia. I. The interrelationships of iron and aluminium extracted by acid ammonium oxalate and carbon 509

J. C. Hughes and P. H. Le Mare. High gradient magnetic separation of some soil clays from Nigeria, Brazil and Colombia. II. Phosphate adsorption characteristics, the interrelationships with iron, aluminium and carbon, and comparison with whole soil data 521

J. Embrechts and G. Stoops. Microscopical aspects of garnet weathering in a humid tropical environment 535

C. E. Mullins and B. J. Hutchison. The variability introduced by various subsampling techniques 547

T. Batey and C. W. Childs. A qualitative field test for locating zones of anoxic soil 563

Applications

D. L. Rimmer. Soil physical conditions on reclaimed colliery spoil heaps 567

Number 4

BRUCE E. BUTLER. A new system for soil studies 581

M. F. O'SULLIVAN and B. C. BALL. A comparison of five instruments for measuring soil strength in cultivated and uncultivated cereal seedbeds 597

B. C. BALL and M. F. O'SULLIVAN. Soil strength and crop emergence in direct drilled and ploughed cereal seedbeds in seven field experiments 609

W. H. UTOMO and A. R. DEXTER. Changes in soil aggregate water stability induced by wetting and drying cycles in non-saturated soil 623

R. T. SHANMUGANATHAN and J. M. OADES. Modification of soil physical properties by addition of Fe(III) polycations: influence on plant growth 639

K. C. CAMERON and A. WILD. Comparative rates of leaching of chloride, nitrate and tritiated water under field conditions 649

K. C. CAMERON and A. WILD. Prediction of solute leaching under field conditions: an appraisal of three methods 659

GERALDINE S. P. RITCHIE, (the late) A. M. POSNER and I. M. RITCHIE. The polarographic study of the equilibrium between humic acid and aluminium in solution 671

J. R. SANDERS. The effect of pH upon the copper and cupric ion concentrations in soil solutions 679

P. H. LE MARE. Sorption of isotopically exchangeable and non-exchangeable phosphate by some soils of Colombia and Brazil, and comparisons with soils of southern Nigeria 691

R. G. OLSEN and M. N. COURT. Effect of wetting and drying of soils on phosphate adsorption and resin extraction of soil phosphate 709

C. P. MURPHY. A comparative study of three methods of water removal prior to resin impregnation of two soils 719

V. C. FARMER and A. R. FRASER. Chemical and colloidal stability of soils in the Al_2O_3–Fe_2O_3–SiO_2–H_2O system: their role in podzolization 737

J. HERBAUTS. Chemical and mineralogical properties of sandy and loamy-sandy ochreous brown earths in relation to incipient podzolization in a brown earth–podzol evolutive sequence 743

MOHAMMAD AFZAL KHAN and STEPHEN NORTCLIFF. Variability of selected soil micronutrients in a single soil series in Berkshire, England 763

M. B. PAGE and O. TALIBUDEEN. Critical potassium potentials for crops: 2. Potentials for wheat, maize, peas, beans and sugar beet in their early growth on a sandy loam 771
